**(54)NONAQUEOUS ELECTROLYTE SECONDARY BATTERY****(57)Abstract:**

**PURPOSE:** To provide a nonaqueous electrolyte secondary battery having an excellent charge/discharge cycle characteristic.

**CONSTITUTION:** A positive electrode 1 to which fiber-like graphite is added is used as a positive electrode having an active material of  $\text{LiCoO}_2$ , and a lithium metal is employed as a negative electrode 4. A nonaqueous electrolyte secondary battery having a good charge/discharge cycle characteristic can be obtained, because a current collecting property in the electrode becomes excellent even charging and discharging are repeated, by adding the fiber-like graphite to the positive electrode.
